

Python Developer Hiring Task

Mini-Project: Job Aggregator Web App

Build a Django web application that scrapes the latest 10 job postings for "Python Developer" from jobvision or LinkedIn. The app should:

1. Display the aggregated job listings on a webpage.
2. Provide a search bar to filter jobs by title or company name.
3. Schedule the scraping script to run every day at midnight.

We expect these from your project:

- Python and Django best practices
- Clean, robust scraping logic
